

**SPM010 solar panel, 12 volt, 10 watt.**

The panel fastens to the frame of the panel using 6mm-1 machine screws passed down through the panel with a fender washer on the outside and a nut on the inside. Tighten, using thread lock compound or a little Goop if vibration is a concern. The brace is fastened to the bracket with a 1/4"-20 screw with nut and lock washer. The bracket and brace can be held onto a pole using stainless steel hose clamps of appropriate size. Or it can be affixed to a wood pole or to the roof of a weather shelter using screws. The assembly can alternatively be mounted on the roof of a weather shelter.

wire nuts (for connecting solar panel to CG1129 battery charger).
